

The **PATON** Fire Fighting Trailer has a strong utility function incorporated into the design. A solid functional frame work surrounding the water tank enables the user to carry more equipment other than for simple fire needs.

A durable polyethylene tank with an internal baffle provides enough water for general purpose fire needs, such as conducting burn off activity or to simply cart water.

The combination of trusted brands using a **HONDA** 5.5hp engine and **DAVEY** pump means water pressure and delivery are both efficient and fast when required. Combine this with 20 metres of 25mm fire-fighting hose, a 10 metre 38mm Heliflex transfer hose and camlock quick release fittings, and your fire-fighting system is complete.

On-board storage is provided with a toolbox cabinet at the front. A safety rail is also incorporated into the trailer design to protect and support the individual riding on the trailer while undertaking fire work.

Optional upgrades are available

SPECIFICATIONS

- 🔥 Single axle
- 🔥 Overall Length: 3360mm
- 🔥 Overall Width: 2120mm
- 🔥 Overall Height: 1770mm
- 🔥 Spring suspension
- 🔥 Lights and indicators
