

### APPLICATION

Hay cradles prevent sheep and cattle from sleeping in or walking in the hay. They reduce the wastage of the bale by up to 30%, and ensure the feed is kept up off the ground.

The sheep cradles are lower than the cattle model giving lambs and adult sheep better access to the hay. The head spaces are also smaller to minimise access into the cradle.

### FEATURES

- Reduces wastage by 30%
- Can be used for square bales or round bales
- Fully galvanised finish
- Light weight structure
- Easy to pick up and reposition
- Structurally strong and long lasting
- Available in 3 lengths – 1.4m, 2.5m and 4.0m
