

Hay Ring – 3 Piece

(Product code: BFR32HOOPS)

Product Overview:

Hay rings are a simple and efficient way to maximise the longevity of a round bale.

The unit keeps the bale maintained and eliminates fouling of the hay by stock.

This simple and quick to assemble freight-friendly unit comes shipped on a 2.4m pallet, making interstate freight a cheap and viable option for our customers.

Once the unit is assembled and all locking pins are in place, the unit is solid and can easily be moved with the forks of your tractor or hand rolled across the paddock.

A solid construction from galvanised pipe and RHS steel, we stand behind the build quality of this hay ring. 55 years of design, engineering, experience and valued customer feedback has gone into this design.

So don't fall for a cheap import that will twist and buckle after a fortnight of use.

Paton Hay Rings are 100% Australian made, feature additional reinforcement to prevent hoop bending and are built to last.
