

Heavy Duty Cattle Trough – 4.8m

(Product code: FTHDCT48)

Product Overview:

The Paton Heavy Duty Cattle Troughs provide the user with an alternative to a concrete trough without the weight, and yet is heavy enough so cattle don't damage or crack a frame as with a light weight plastic trough.

Fully galvanised with a large 900L capacity, this 4.8m unit has a strong frame to withstand tipping and a good weight so it won't be blown over in the wind. The trough is mounted on a gal pipe base so it can be skidded around easily.

These troughs can be stacked and lifted with the forks of your tractor making them very convenient to use and move about.

KEY FEATURES

- Strong, unbreakable design to withstand dragging through paddocks and lifting when stacked
- 900L capacity
- Solid and sturdy sub-frame to withstand tipping
- Tapered in design to allow for easy stacking for transportation
- Suitable for calves, weaners, adult cattle
