

PATON

TRAIL FEEDERS CATALOGUE

Issued April 2023

TRAIL FEEDERS

The Paton range of trail feeding trailers are designed to suit a broad range of farmer needs and activities. From the small ATV user up to the larger 3 tonne tandem trailer, all your trail feeding needs are covered.

These trailers have been purpose designed to deliver excellent functionality for the farmer. The trailer design combined with the advanced PatonTech scale system, means all the valuable feed being delivered onto the ground is both measured and controlled

1700mm (H)

- Strong base frame
- Mount on tray for dual or single cab ute
- Hard top
- Spring load rope to operate feed door
- Fold down side chute
- Frame hooks for turn buckle tie down

Why Trail Feed Stock?

Trail feeding animals is a well known practice that suits many farm operations despite it being a labour intensive activity. This being so, many livestock farmers find this a preferred method of supplementary feeding animals. Stock and water really need to be inspected on a daily basis, so the addition of feeding animals as part of this practice seems little extra effort when these two tasks are combined.

Other management benefits that flow from this feeding practice include:

Observe and establish the general wellness of the mob.

Visual condition scoring of animals as they turn up to the feed trail.

'Roll call' effect and the capacity to see 'missing' animals across the paddock.

Assess animal feeding needs and current pasture adequacy.

Identify and confirm that all animals are participating in the feeding process.
